

Chapter 6

Delocative adjectives surfacing as participles

Romain Garnier

Université de Limoges

This paper proposes to reassess several active participles of the type **CC-en-íont-* and **CC-ént-* as decasuatives built on a “petrified” locative or oblique **CC-én*. At its face value, Ved. *bhuraṇ-yánt-* ‘quivering, active’ (of Agni) is the participle of the intransitive present stem *bhuraṇ-yá-ti* ‘to be active or restless’, alongside its deverbative doublet *bhuraṇ-yú-* [adj.] ‘quivering, active’. In fact, the indicative *bhuraṇ-yá-ti* is likely to have been backformed after *bhuraṇ-yánt-*, which may be accounted for as a decasuative adjective (reflecting PIE **b^hh₂-en-íó-nt-*), derived from a locative **b^hh₂-én* ‘in quick motion’. The suffix *-nt-* was added as a characterizing morpheme to a former **-íó-* stem, with the same pattern as PIE **ġerh₂-ó-nt-es* ‘the old ones’ (vs. simplex **ġerh₂-ó-*) or **g^uih₃-uó-nt-es* ‘the living ones’ (vs. simplex **g^uih₃-uó-*). Several other cases will be dealt with, involving PIE 1. **b^heh₂-* ‘to shine’, PIE 2. **b^heh₂-* ‘to speak, to say’, and PIE **g^ueh₂-* ‘to make a step’.

1 Vedic *-anyá*-presents: state of the art

In Vedic, there is a small class of *-anyá*-presents such as *tur-aṇ-yá-ti* ‘to rush’, *bhur-aṇ-yá-ti* ‘to be active or restless’ (transitive ‘to agitate, to stir [a liquid]’), *riṣ-aṇ-yá-ti* ‘to suffer injury’, *kṛp-aṇ-yá-ti* ‘to desire’, *pṛt-aṇ-yá-ti* ‘to fight’. YAv. *zar-an-ii-a-* ‘to be irritated’ reflects the Iranian counterpart of this verbal suffix. One may note that most of these verbs are intransitive (Ved. *bhur-aṇ-yá-ti* only being labile). Jasanoff (2003: 122) suggests identifying this verbal derivation with Hittite duratives in *-anna/i-*, by assuming that the geminates reflect PIE **-nh₂-i-*. To trigger the assimilation **-nH-* > *-nn-*, the suffix requires an initial vowel, reconstructed as PIE **-énh₂-i-* by Melchert (1992: 40–43) or **-ótn-i-* by Kloekhorst

(2008: 175). According to Jasanoff (2003: 125), Ved. *-anyá*-presents cannot be denominatives to nominal formations in *-an-* (or *-ana-*) because the underlying nasal stems are never attested – a claim which needs to be reassessed. Besides – as he duly points out – thematic nouns in *-ana-* would rather produce denominatives in ***anā-yá^{ti}*. Jasanoff instead compares Ved. *-anyá*-presents to the type of Ved. *grbh-ā-yá^{ti}* ‘to seize’ (< PIE **-ṇh₂-iē/ó-*), by assuming an unrecognized Indo-Iranian sound change triggering the shortening of a long vocalic sonorant when following another vocalic sonorant (Jasanoff 2003: 126). He claims that Ved. *dam-an-yá^{ti}* ‘to subdue’ would be the regular reflex of PIE **dṇh₂-ṇh₂-iē/ó-*, whereas the doublet *dam-ā-yá^{ti}* ‘id.’ would be analogically remade after the pattern of *grbh-ā-yá^{ti}* ‘to seize’. This seems to me an *ad hoc* rule, which is not supported by any independent lexeme. Furthermore, this implies that forms such as Ved. *riṣ-aṇ-yá^{ti}* ‘to suffer injury’, *kṛp-an-yá^{ti}* ‘to desire’, or *pṛt-an-yá^{ti}* ‘to fight’ would be analogical. This phonological account should be rejected, since Jasanoff does not explain why Vedic *-anyá*-presents (always inflected in the active) are often intransitive or labile. By contrast, *-ná^{ti}* or *-ā-yá^{ti}* presents are exclusively transitive (for instance Ved. *iṣ-ṇá^{ti}* ‘to send’). The alleged lack of evidence for *-an*-stems does not withstand scrutiny: alongside *iṣ-aṇ-yá^{ti}* ‘to cause to make haste, excite, drive’, there is *iṣ-āṇi* [loc.] (RV 2.2.9d) ‘at [her] impulsion’. Likewise, alongside *tur-aṇ-yá^{ti}* ‘to be quick or swift’, there is *tur-āṇa-* [adj.] ‘swift’ and *bhur-aṇa-* [adj.] ‘quick, active’ (= stressed **bhur-āṇa-*), akin to *bhur-aṇ-yá^{ti}* ‘to be active or restless’ and *bhur-aṇ-yú-* [adj.] ‘quivering, active’.

Independently, the comparison of Ved. *-anyá*-presents with Hitt. *-anni-* must now be considered outdated, since this Anatolian iterative suffix cannot reflect PIE **-ṇh₂-i-* (or **-énh₂-i-*), but rather PA **-ád-n-i-*, as *per* Sasseville (2021: 526–528). In my opinion, one has to start with an archaic endingless locative such as Ved. **iṣ-án* ‘with drive, impetus’, **bhur-án* ‘in quick motion’, Av. **zar-an* ‘with anger’. The lability of the derived verbs vindicates their nominal origin (viz. *bhur-aṇ-yá^{ti}* ‘to be/to set in quick motion’), since **iṣ-án* ‘with drive, impetus’ could be either agent- or patient-oriented. As a result, several “active” participles of the type **CC-en-iónt-* could in fact be reanalyzed as old decasuative adjectives built on a “petrified” locative or oblique stem **CC-én*. Another strategy of coining a delocative adjective was to add a thematic vowel: PIE **-én-o-* (cf. Ved. *tur-āṇ-a-* [adj.] ‘swift’ and **bhur-āṇ-a-* [adj.] ‘quick, active’ < PIE **b^hh₂-én-o-*). I would tentatively account for Ved. *dam-an-yá^{ti}* ‘to subdue’ by reconstructing a PIE **démh₂-mṇ* [nt.] ‘taming’, which was prone to undergo the so-called “*aśnō*-rule”, viz. the reduction of PIE **-mn-* to **-n-* after obstruent, cf. Nussbaum (2010) and Melchert (2010: 186–188). The genitive singular **démh₂-(m)n-os* would thus surface as Ved. **dám-n-as* after which an endingless locative **dám-an* ‘in subduing’ was formed. This very form may have been the base of the denominative verb

dam-an-yá^{-ti} ‘to subdue’ (with denominal causativity, viz. *‘to put into subduing, to cause sbdy. or sth. to be in the state of being subdued’). One may reasonably speculate that *dam-an-yá^{-ti}* ‘to subdue’ is basically an indicative and was built within Vedic, by contrast with *bhur-aṇ-yá^{-ti}*, which is likely to have been inherited, since there is comparative evidence for PIE **b^hrh₂-én* [loc.] ‘in quick motion’ (see Section 2).

As already mentioned, Ved. *bhur-aṇ-yú-* [adj.] ‘quivering, active’ is the functional equivalent of the participle *bhur-aṇ-yánt-* ‘id.’, like *tur-aṇ-yú-* [adj.] ‘rushing’ vs. *tur-aṇ-yánt-* ‘id.’. One has perhaps to assume that the intransitive or labile *-anyá-* presents were backformed after their participles *-an-yánt-*, which were used as adjectives (‘rushing, quivering’). The starting point may have been an endingless locative **bhur-án* ‘in quick motion’ (< PIE **b^hrh₂-én*) from which was derived (i) a decasuative *-yánt-* participle, and (ii) a decasuative *-yú-* adjective. I consider that in such cases the *-yánt-* participle is to be segmented as **-yá-nt-*, with the well-known “characterizing” morpheme **-nt¹* added to a decasuative **-yá-* adjective (< PIE **-iō-*). To sum up, one has to start with PIE **b^hrh₂-en-iō-* [adj.] ‘quivering’,² a decasuative stem which was recharacterized as PIE **b^hrh₂-en-iō-nt-* ‘the swift one’ (Ved. *bhur-aṇ-yánt-* ‘quivering, active’ [of Agni]). Independently, there was also PIE **b^hrh₂-en-iú-* [adj.] (Ved. *bhur-aṇ-yú-*) and also PIE **b^hrh₂-én-o-* [adj.] (Ved. **bhurāna-*).

The derivational history of Ved. *bhur-aṇ-yá^{-ti}* proposed above is not totally unparalleled: There are good Anatolian parallels. Hitt. **išhan-iya-* ‘to bind’ reconstructed by Rieken (1999: 286–287) based on Hitt. *išhanittar* [c.] ‘relative by marriage’ (< PA **sH-an-y-é-tros*) requires a base **išhan* (< PIE **sh₂-én* [loc./obl.] ‘with bond’), which she further connects with Hitt. *šahhan-* [nt.] ‘(feudal) obligation’.³ Interestingly, “Luwoid” derivatives in *-att-allā-* (with *-allā-* from PA **-élā-*)

¹See for instance PIE **ǵerh₂-ó-nt-es* ‘the elders, the old ones’ (vs. simplex **ǵerh₂-ó-* [adj.] ‘wrinkly, decayed’) or PIE **ǵ^hih₃-uó-nt-es* ‘the living ones, the living world’ (vs. simplex **ǵ^hih₃-uó-* [adj.] ‘quick, alive’). The indicative **ǵ^hih₃-u-é/ó-* ‘to live’ (Ved. *jíva^{-ti}*, Lat. *vīvō*) is likely to have been backformed after its (pseudo-)participle stem. That the **-ont-* participles were formerly independent adjectival stems is assumed by Melchert (2017). For the suffix, one may compare CLuw. *wayant(i)-* [c.] ‘animal’ from PIE **ǵ^hoih₃-ó-nt-es* ‘the living ones; creatures’ which is a recharacterization of PIE **ǵ^hoih₃-ó-* [adj.] ‘living’. PIE **ǵ^hih₃-uó-nt-es* is the *Scharnierform* yielding a present **ǵ^hih₃-u-é/ó-*, which can hardly be accounted for by conversion **ǵ^hih₃-uó-* → **ǵ^hih₃-u-e/o-* or by deletion (viz. PIE **ǵ^hih₃-u(e/o)e/o-*), pace Villanueva Svensson (2021: 273–274).

²The same pattern is seen in PIE **ǵ^hih₃-en-iō-* [color adj.] ‘yellow’ → Ved. *hiraṇya-* [nt.] ‘gold’ (lit. ‘being in the state of shining’).

³One should note that, from now on, due to the existence of the so-called “*aśnō*-rule”, Hitt. *šahhan-* shall no longer be directly assigned to PIE †*śéh₂-n̥* ‘obligation’ pace Rieken (1999: 287) and Kloekhorst (2008: 691), but to PIE **śéh₂-m̥n̥* [nt.] with nasal-deletion after the gen.sg. **śéh₂-(m)n-os*.

and *-alla/i-* (< PA **-élo-* [with the so-called “Luwian *i*-mutation”]) are built directly on the stem of the base: Hitt. *išhan-attallā-* [c.] (?) and *išhan-alla/i-* [c.] (?), both of unclear meaning. As I have recently suggested (Garnier 2022b: 175), Hitt. *kuššan-īye/a-^{zzi}* ‘to hire, to employ’, which is akin to Proto-Gmc. **χūz-jan-* ‘to hire’ (Kloekhorst 2008: 498; cf. OE *hȳr* [str.f.] ‘wages, interest, usury’ < **χūz-ō-*), may be accounted for by a base **kuššan* [loc.] ‘into [temporary] possession’, reflecting PIE **kuh₁-s-én* which was a doublet of PIE **kuh₁-és(i)* [loc.], possibly associated to PIE **kéyh₁-ōs* [f.] ‘possession’ (of holokinetic inflection), or perhaps PIE **kéyh₁-s-* [nt.] ‘id.’ (of proterokinetic inflection). The noun *kuššan-* [nt.] ‘pay, salary, fee, hire’ is likely to have been backformed after *kuššan-īye/a-^{zzi}* ‘to hire, to employ’. For the meaning, one may compare Gk. *κῦριεία* [f.] ‘possession’ vs. *κῦριος* [m.] ‘lord, ruler’ (< PIE **kuh₁-r-i-ǵó-* [adj.] ‘endowed with strength’, cf. PIE **kuh₁-r-í-* [f.] ‘strength’ derived from PIE **kuh₁-r-ó-* [adj.] ‘strong’). Interestingly, the “locative-1” (PA **ku²-és*) is indirectly reflected by Lyd. *qašaas* [c.] ‘hire; rental’ (< PA **ku²-es-yā-*) and Lyc. *qehñni-te* ‘he rented’ (< Pre-Lyc. **qes-Vni-ti*), with unlenited endings pointing to PA **-yé/ó-* (Sasseville 2021: 166–167).

2 A case study: PIE **b^hrh₂-én* ‘in quick motion’

2.1 PIE **b^hrh₂-én* ‘in quick motion’

I have reconstructed a PIE etymon **b^hrh₂-én* [loc.] ‘in quick motion’ (Garnier 2022a: 9), which would surface as Ved. **bhur-án* (for which see above). There is additional evidence for assuming such an “adverbial” stem: (i) PIE **b^hrh₂-én* [HK f.] (< PIE **-én-s*) ‘vehemence’ (Section 2.2); (ii) PIE **b^hrh₂-én-o-* [adj.] ‘being in quick motion’ (Section 2.3); (iii) PIE **b^hrh₂-én-t-* [adj.] ‘being in quick motion’ (Section 2.4); (iv) PIE **b^hrh₂-en-ǵó-* [adj.] ‘quivering, active’ → “characterized” PIE **b^hrh₂-en-ǵó-nt-* ‘the swift one’ and PIE **b^hrh₂-en-ǵú-* [decasuative adj.] ‘quivering, active’ (Section 2.5). PIE **-én*-locatives from root nouns are assumed by Neri (2017: 326–327).

2.2 PIE **b^hrh₂-én* [HK f.] ‘rush, fury, vehemence’

OIr. *barae* [f.] ‘fury, anger’ reflects Proto-Celt. **bar-ēs* (with **-ē* < **-en-s*), acc.sg. **bar-en-an*,⁴ which in turn reflects a remodeling of an old hysterokinetic stem:

⁴Within Celtic a zero-graded secondary derivative **bar-n-iko-* was coined, cf. OIr. *barnech/bairnech* [adj.] ‘irritated’.

PIE **b^hrh₂-én* [f.] ‘vehemence’ (with **-én* < PIE **-én-s*).⁵ This inherited form (such nasal stems are not productive in Celtic) has been assigned by Stüber *apud* Balles (2002: 1–2) to PIE **b^herh_x-* ‘mit einem scharfen Werkzeug arbeiten’ (LIV² 64), exemplified by Lat. *feriō* ‘to strike’ and *forāre* ‘to bore through, to pierce’. Balles (2002: 7) further compares OIr. *barae* with Hom. φρήν* [f.] ‘midriff, diaphragm’ (in fact a *plurale tantum* φρένες), which has almost nothing to do with ‘anger’.⁶ The PIE root **b^herh₂-* ‘sich schnell bewegen’ (LIV² 81)⁷ is perhaps a better candidate for a noun ‘fury, anger’.⁸ As I have previously suggested (Garnier 2021: 53, fn. 6), the PIE root **b^herh₂-*/**b^hreh₂-* ‘to hurry, to rush’ (with *Schwebeablaut*) could be explained as a reanalyzed nominal stem **b^hér-h₂-*/**b^hr-éh₂-* ‘hurry, haste, fury’ [of proterokinetic inflection], built on the PIE primary root **b^her-* (cf. Gk. φέρομαι [mid.] ‘to move rapidly’).

2.3 PIE **b^hrh₂-én-o-* [adj.] ‘being in quick motion’

Ved. **bhur-án-a-* [adj.] ‘quick, active’, similar to Ved. *tur-ána-* [adj.] ‘swift’ for its formation, may represent something inherited, if one compares W. *bar-an* [m.] ‘fury, anger’ (< Proto-Celt. **barano-*), which shows a trivial conversion from **‘angry’* to *‘anger’* (perhaps via an old neuter stem *baranon*). For the semantic discrepancy between ‘active’ and ‘angry’, one may mention Ved. *bhúr-ñi-* [adj.] ‘restless, active, angry’ (< PIE **b^hrh₂-n-í-* [f.] ‘vehemence’).

2.4 PIE **b^hrh₂-én-t-* [adj.] ‘being in quick motion’

From PIE **b^hrh₂-én* [loc.] could be derived an adjective **b^hrh₂-én-t-* ‘being in quick motion’, with the “characterizing” or “individualizing” morpheme **-t-*, a delocative combination producing **-én-t-* which could eventually be reanalyzed

⁵There was no loss of the final nasal after a long vowel due to the presence of the accent, as *per* Harðarson (2005: 218–219). For the internal derivation yielding a hysterokinetic stem from a PIE **-én-locative*, see Neri (2017: 324, fn. 181).

⁶I have explained Hom. ἄφρων [adj.] ‘senseless, foolish, heedless’ as the reflex of a PIE etymon **ñ-g^{uh}r(h₁)-on-* ‘without sense of smell, not able of scenting’ (Garnier 2021), eventually reanalyzed as a privative *bahuvrīhi* (viz. ‘lacking [sound] φρένες’), which implies that Hom. φρένες would be a backformation, coined after other names of body parts showing the suffix -ήν. In Homer, the φρένες (this organ is considered double) are rather the seat of the intelligence, memory, and perception. When someone is angry, his φρένες turn black, because they are filled with anger, as in A 103, μένεος δὲ μέγα φρένες ἄμφι μέλαινα # πίμπλαντ(ο) “and with rage was his black heart wholly filled” (transl. Loeb).

⁷cf. Ved. *bhar^j-* ‘to move rapidly, to rush’, Hitt. *parḫ-* ‘to chase, pursue, to hunt’, and the newly identified HLuw. **/par.xa-/* ‘to expel’ (Melchert 2016: 204–206).

⁸Ved. *bhúr-ñi-* [adj.] ‘restless, active, angry’.

as a participle **-ént-* to the zero grade-stem of a root present.⁹ This very form is reflected by YAv. *barənt-* [ptcp.] ‘stürmend’ (= Ved. **bhur-ánt-* ‘quivering’ replaced by the thematic mid. ptcp. *bhur-á-māṇa-*) and Hitt. *parḫ-ant-* [ptcp.] (< PA **barH-ánt-*) meaning both: (i) ‘being in quick motion, galloping’ [intransitive]; (ii) ‘set in quick motion’ [transitive passive]. The intransitive meaning (i) is secure in: *pār-ḫa-an-d[a-an]* [acc.sg.c.] ‘galloping’ (KUB 35.145 rev. 13), by contrast with (ii) *arḫa pār-ḫa-an-za* [nom.sg.c.] ‘expelled/banished’ (KUB 8.1 ii 7–8). The scalar process of grammaticalization leading to a “pure” transitive passive participle (‘expelled’) developed by increasing the verb’s valency by turning it into a causative (note the use of *arḫa* [adv.] ‘off, away’ here with the lexical value of a preverb). As a result, one may speculate that the transitive present *parḫ-zi* ‘to chase’ is in fact backformed after its passive participle *parḫ-ant-** ‘chased’.

2.5 PIE **b^hrh₂-en-ió-* [adj.] ‘being in quick motion’ and related forms

As already mentioned in Section 1, one has to posit a delocalival adjective **b^hrh₂-en-ió-* [adj.] ‘being in quick motion’, indirectly reflected by its “characterized” doublet **b^hrh₂-en-ió-nt-* [adj.] ‘the swift one’. This very form was eventually reinterpreted as a present “active” participle (Ved. *bhur-aṇ-yánt-* ‘quivering, active’ [always of Agni]) of an intransitive verb *bhur-aṇ-yá-^{ti}* ‘to be active or restless’. Independently, there was also a renewed adjective (Ved. *bhur-aṇ-yú-* [adj.] ‘quivering, active’ < PIE **b^hrh₂-en-iú-*). The main bulk of the attestations consists of intransitive forms: by contrast with the labile transitive present *bhur-aṇ-yá-^{ti}* ‘to agitate, stir (a liquid)’ [RV 2x], there is *bhur-aṇ-yá-^{ti}* ‘to be active or restless’ [RV 3x] (surely backformed after *bhur-aṇ-yánt-*), *bhur-aṇ-yánt-* ‘quivering, active’ [RV 2x], and *bhur-aṇ-yú-* [adj.] ‘quivering, active’ [RV 5x]. In other words, 10 out of 12 attestations are intransitive.

3 PIE 1. **b^heh₂-* ‘to shine’

One may also reconstruct PIE **b^hh₂-én* [loc.] ‘into light; showing; appearing’, which was an adverb, perhaps compositional only (viz. PIE **^ob^hh₂-én*). This adverbial locative was presumably built on a root noun ([virtual] PIE **b^hóh₂-* [f.] ‘light’), which is well-attested in composition, as is clear from Ved. *vi-bhṛá-* [adj.] ‘shining’ (< PIE **h₁ui-b^héh₂-*). This *-én*-locative would be the derivational base

⁹This derivational pattern is exemplified by PIE **h₁d-én* [loc.] ‘beim Beißen befindlich’ → hypo-static **h₁d-én-t-* ‘beißend’ (Neri 2017: 150–151, fn. 211). One may also add several Vedic “aorist” participles not referring to a previous action, such as Ved. *dhṛṣ-ánt-* ‘bold’ (Lowe 2017: 163), which could reflect PIE **d^hṛs-én* [loc.] ‘with boldness’ → **d^hṛs-én-t-* ‘bold’.

of an adjective **-b^hh₂-én-t-* ‘shining’ with the aforementioned “characterizing” or “individualizing” morpheme **-t-* (cf. Section 2.4), for instance PIE **pro-b^hh₂-én-t-* [adj.] ‘that appears before, manifest’ (derived from an adverb **pro-b^hh₂-én*), which was eventually reanalyzed as the “participle” of an amphikinetic present (PIE **b^héh₂-ti*, **b^hh₂-énti* ‘to shine’). One may assume that PIE **pro-b^hh₂-én-t-* [adj.] ‘shining forth’ → **pro-b^hh₂-ént-* [ptcp.] would have given rise to a simplex **b^hh₂-ént-* [ptcp.] ‘shining’. This form is reflected in the Hesychian gloss φάντα·λάμποντα [acc.sg.m.] ‘shining’ (Gk. φάντα < PIE **b^hh₂-ént-η*). It is noteworthy that this isolated form does not belong to any synchronic verbal stem: The etymologically related verb is φαίνω ‘to make appear, to show’ (φαίνομαι [mid.] ‘to appear’). Within Greek, the privative adjective ἄ-φαν-τος ‘invisible’ and its sigmatic counterpart ἄ-φαν-ής [adj.] ‘id.’ are deverbative formations derived from the present stem φαίνω (< **p^hán-yō*). Schirmer (LIV² 69), after Klingenschmitt (1982: 113), assumes here a nasal-infixed present **p^hán-e/o-* (< PIE **b^h-ŋ₂-h₂-*) with thematization, recharacterized with the suffix **-ye/o-*. This assumption would imply that Proto-Gk. **p^hán-e/o-* ‘to make visible’ would be closely related for its formation to Arm. *banam* ‘to open’ (allegedly from PIE **b^h-n-éh₂-ti*, **b^h-ŋ₂-h₂-énti*), and Albanian (Tosk *běj*, Gegh *bāj*, Arbëresh, Arvanite *běj*) ‘to make appear; to do, to make’¹⁰ which points to Proto-Alb. **ban-ja-*.¹¹ However, Arm. *banam* could be a productive *-na*-present of the type seen in Arm. *bar^hnam* ‘to lift’ (< **barj-nam*) and *dar^hnam* ‘to come back’ (< **darj-nam*), whereas Proto-Alb. **ban-ja-* ‘to bring to light; to produce’ could be derived from its participle **bana-* (T. *bërë*, G. *bënë*), reflecting PIE **b^hh₂-nó-* [adj.] ‘shining, appearing’ or – alternatively – PIE **b^hh₂-én-o-* [adj.] ‘id.’. Besides, **-nja*-presents are productive in Albanian and should therefore be rejected in comparisons.

As a result, I will tentatively suggest another derivational chain for Gk. φαίνω ‘to make appear’. In my opinion, one may start with an adverb **pró-p^ha* ‘appearing before’ (< PIE **pro-b^hh₂-én*)¹² as the base stem of a denominative verb προφαίνω (< **pro-p^hán-yō*) ‘to make appear before’, displaying the same pattern as

¹⁰For a summary of the attested forms see Demiraj & Neri (2021).

¹¹By contrast with Vedic *-anyá*-presents, the majority of Proto-Alb. **-anja*-stems are transitive, as ascertained by Genesin (2005: 169–170) and Schumacher & Matzinger (2013: 50–51).

¹²Except for Hom. **αἰῆν* [adv.] ‘for ever’, which was oxytone, Greek has restructured the PIE locatives in **-en* on zero grade **-ŋ*: see for instance Gk. *χείμα* [adv.] ‘in winter’ vs. Ved. *hémān* ‘id.’ (< PIE **ĝ^héh₂-m-en*), as per Nussbaum (1986: 189). As a result, Gk. **pró-p^ha* [adv.] ‘appearing before’ (for expected ****pró-p^han*) should be the reflex of PIE **pro-b^hh₂-én*. Interestingly, alongside **-én*, there is also evidence for **-ér* used to build adverbs. Gk. *ἄραρ* [adv.] ‘quickly’ could be explained by PIE **sm-b^hh₂-ér* [adv.] ‘in a glimpse’, an adverbial formation built on PIE **sm-b^héh₂-* [f.] ‘glimpse’, rather than by PIE **h₂éb^h-r* ‘rapid stream’ assumed by Willi (2004: 327).

Hom. λίπα [adv.] ‘richly, in a fat way’ (of anointing) → λιπαίνω ‘to anoint’. One may go a step further and assume that the “complex” suffix **-nye/o-* is due to resegmentation of the present stem **pro-p^hán-ye/o-* as **pro-p^há-nye/o-*, after which were coined such presents as Gk. κλίνω (< **klí-nyō*) ‘to cause to lean’ (with sigmatic deverbatives in **^oklin-ēs*) and πλύνω (< **plú-nyō*) ‘to wash, to clean’ (with sigmatic deverbatives in **^oplūn-ēs*).¹³

A possible reflex of PIE **(pro-)b^hh₂-én* [adv.] may be attested in Germanic: Go. *bandwjan* ‘to give a sign’ and *bandwa** [str.f.] ‘sign’ could be derived from a Proto-Germanic action noun **bandu-* [m.] ‘bright appearance’ (< PIE **b^hh₂-en-tú-* [abstract] ← **b^hh₂-en-tó-* [adj.] ‘endowed with shine’). Pace EDPG 51–52, Go. *bandwjan* and *bandwa** can hardly be related to Proto-Gmc. **bann-an-* [str.v.] ‘to command, to summon’ (for which see Section 4). The original meaning was obviously ‘apparition, vision’, as is clear from the Langobardic cognate of Go. *bandwa** borrowed in Late Latin (*vexillum quod bandum appellat* in Paulus Diaconus). The concrete meaning ‘flag, banner’ is also supported by Byz. Gk. βάνδον [nt.] (in Procopius). For the meaning, one may compare Ved. *ketú-* [m.] ‘bright appearance’ and ‘flag, banner’ (< PIE **k^uoīt-ú-*).

4 PIE 2. **b^heh₂-* ‘to speak, to say’

From PIE 2. **b^heh₂-* ‘to speak, to say’, we may assume an adverbial oblique **b^hh₂-én* as the derivational base of a PIE adjective **b^hh₂-én-o-* ‘speaking’ whose characterized form **b^hh₂-én-o-nt-* ‘the speaking one; the one endowed with speaking’¹⁴ is surely reflected by Ved. *bhán-ant-** [ptcp.] which would thus antedate the indicative *bhán-a-ti* ‘to speak, to say’. This stem has been accounted for by Schirmer (LIV² 69–70 & fn. 6) as the restructuring of an athematic nasal-infixed present **bhaná-ti*, **bhan-ánti* (< PIE 2. **b^h-n-éh₂-ti*, **b^h-n-h₂-énti* ‘to speak, to say’). Kroonen (EDPG 52) instead assumes a thematic root present **b^hénh₂-e/o-*, which he compares to Proto-Gmc. **bann-an-* ‘to summon’, allegedly reflecting IE **[†]b^hónh₂-e/o-*, with the final laryngeal triggering the gemination of the nasal. He does not mention the reconstruction of this strong verb as PIE **b^hh₂-ny-é/ó-* by Seebold (1970: 89), which was perhaps less anachronistic than its rewriting

¹³In the final chapter of his thesis, Praust (1998: 121–135) reconstructs an athematic *-ni*-present class: for instance, PIE **kli-néj-ti*, **kli-ni-énti* to account for Gk. κλίνω (< **klí-nyō*) ‘to cause to lean’ (Aeol. κλίννω). The adduced comparanda are YAv. *siri-nu-* (or *sri-nu-*) and Lat. **clināre* (with a long *-ī-*), which he considers to be a durative present to a simplex **cliniō* (Praust 1998: 132). This is simply an *ad hoc* assumption.

¹⁴Likewise, after Hitt. *ḫappina-* [adj.] ‘rich’ (< PIE **h₃ép-en-o-*) has been coined *ḫappinant-* [c.] ‘rich person’ (< [virtual] PIE **h₃ép-en-o-nt-* ‘the rich one’).

as IE $\dagger b^h e-nu-é/ó-$ by Kroonen (EDPG 52), who tacitly suggests a verb $*binn-an-$ ‘to speak’ endowed with an intensive doublet $*bann-an-$ ‘to summon’. As already mentioned (see Section 3), the etymological connection with Go. *bandwa*, *bandwa** [f.] ‘sign’ has little to recommend itself, not to mention the etymon $\dagger b^h onh_2-tú-h_2-$ offered by the author.

I would rather assume here PIE $*b^h h_2-en-uó-$ ‘endowed with speaking’, a deca-suative adjective of the pattern $*CC-en-uó-$ which is required by Proto-Gk. $*ξέν-φος$ [m.] ‘guest’ < PIE $*g^h s-en-uó-$ [adj.] ‘being at the feast’ (Garnier 2013: 65).¹⁵ One may therefore assume a “characterized” $*b^h h_2-en-uó-nt-$ ‘the one who speaks with authority; the one who gives orders’ surfacing as Post-IE $*b^h a-nu-ónt-$ [m.] ‘commanding [adj.], commander [m.]’. This form was normalized as Proto-Gmc. $*bánn-and-$ [ptcp.] with secondary root accent. This was the starting point for a strong verb $*bann-an-$ ‘to summon’. Such a verbal reinterpretation of an adjectival stem could have been fostered by other genuine $*and$ -participles used as agent nouns in Germanic: see for instance OE *būend* [m.] ‘dweller, inhabitant’.

Incidentally, one may speculate that the Attic infinitive $φάναι$ (vs. Hom. mid. inf. $φάσθαι$) may be the recharacterization of Proto-Gk. $*p^h án$ ‘in speaking’ (< PIE $*b^h h_2-én$), like the infinitive $ιέναι$ ‘to go’ is the reflex of $*ién$ ‘on the way’ enlarged with the Greek allative adverbial suffix $-αι$ (cf. Hom. $ἴμεν$ vs. $ἴμεναι$), as suggested by Garnier & Pinault (2020: 323).

5 PIE $*g^h eh_2-$ ‘to make a step; to be stable’

One may reconstruct PIE $*g^h h_2-én$ [adv.] ‘firmly standing’ as the base of $*g^h h_2-én-t-$ [adj.] ‘stable’ (reanalyzed as an “aorist” participle $*g^h h_2-ént-$). This form is reflected by Hom. $εὔ δια-βάς$ (M 458) ‘setting his feet well apart’, with a clear

¹⁵PIE $*g^h s-én$ [loc.] ‘at the feast’ may be assigned to PIE $*g^h s-ór$ [AK collective] ‘rich meal’ derived from $*g^h s-r$ [PK nt.] ‘action of eating’ (Garnier 2013: 65). Note that Ir. 2. $*xšnaw-$ ‘to welcome a guest’ (Cheung 2007: 457–458) is possibly backformed after its ptcp. $*xšnu-tá-$ ‘invited, welcome’ (< [virtual] PIE $*g^h s-n-u-tó-$). Perhaps one has to assume here PIE $*g^h s-en-u-ó-nt-$ [characterized adj.] secondarily inflected according to the amphikinetic inflection (viz. gen.sg. $*g^h s-nu-nt-ós$ resyllabified in $*g^h s-nu-nt-ós$ >> Ir. $*xšnuw-ánt-$ ‘invited, welcome’ normalized as as passive ptcp. $*xšnu-tá-$ ‘id.’). More recently, Steer (2019: 338) has rejected the derivation $*g^h s-en-uó-$ [adj.] ‘being at the feast’, suggesting instead a PIE deverbative $*g^h s-nu-ó-$ [adj.] ‘eating’ to a $-nu$ -present assumed by Lipp (2009: 284, 286) → $vřddhi$ -derivative (viz. PIE $*g^h s-énu-o-$ ‘eater’), which seems impossible to me: One would expect PIE $*g^h s-neu-ó-$. See the discussion of Steer’s proposal by Schmitt (2020: 160–161), who considers that a base meaning like ‘eater’ is perhaps too trivial to account for the religious aspects of Homeric hospitality. Schmitt duly mentions the figure of Ζεὺς ξένιος. I had addressed this issue by assuming that the base is PIE $*g^h s-ós-$ [f.] ‘rich meal ceremoniously offered to the guests’.

static value, and not referring to a prior event (Létoublon 1986: 133–135; de Lamberterie 1990: 935). For the semantics, one may compare Gk. βέβαιος [adj.] ‘firm, stable’. There was possibly also a decasuative $*g^u h_2\text{-en-}\check{\iota}\acute{o}\text{-}$ [adj.] ‘firmly standing’ endowed with a “characterizing” doublet $*g^u h_2\text{-en-}\check{\iota}\acute{o}\text{-nt-}$ ‘the one firmly standing’. This adjectival formation could account for Gk. (εἰσ-, ἐμ-, ἐπι-)βαίνοντ- [ptcp.] ‘stepping; setting his feet’ (Hom. ποσὶ βαίνων). One must not confuse Gk. 1. συμβαίνειν ‘to stand with the feet together’ (of a statue) with 2. συμβαίνειν ‘to happen’ (ultimately from PIE $*g^u \eta\text{-}\check{\iota}\acute{e}/\acute{o}\text{-}$ ‘to come [in contact with]’). Similarly, Gk. σύμβασις [f.] ‘agreement’ indirectly reflects PIE $*kóm\text{-}g^u \eta\text{-}ti\text{-}$ [f.] ‘coming together; agreement’, semantically close to Osc. *kúmbened* ‘it is agreed’ (Lat. *convēnit*), but is not related to βάσις [f.] ‘stepping, step, steps’, which rather reflects PIE $*g^u h_2\text{-}tí\text{-}$ [f.] ‘action of stepping’. Both roots have merged in Greek, due to the so-called “satellite-framing” (for instance προ-βαίνω ‘to step forward, to advance’ is *dynamic*). As a result, the routinely adduced equation between Gk. βαίνω ‘to step, to walk’ and Lat. *veniō* ‘to come’ (< PIE $*g^u \eta\text{-}\check{\iota}\acute{e}/\acute{o}\text{-}$), as *per* Kümmel (LIV² 209) is only partly true.

6 Concluding remarks

The above study highlights the process of grammaticalization of “petrified” decasuative formations derived from $*CC\text{-}\acute{e}n$ locatives of root nouns (especially in composition). By internal or external derivation, such forms could produce various delocatives:

- (1) a. PIE $*CC\text{-}\acute{e}n$ [HK f.] (< PIE $*CC\text{-}\acute{e}n\text{-}s$)
- b. PIE $*CC\text{-}\acute{e}n\text{-}t\text{-}$ [adj.]
 (→ pseudo-ptcp. $*CC\text{-}\acute{e}nt\text{-}$ [root present or root aorist])
- c. PIE $*CC\text{-}\acute{e}n\text{-}o\text{-}$ [adj.]
 → $*CC\text{-}\acute{e}n\text{-}o\text{-}nt\text{-}$ [characterized adjective]
 (→ pseudo-ptcp. $*CC\acute{e}n\text{-}ont\text{-}$)
- d. PIE $*CC\text{-}en\text{-}\check{\iota}\acute{o}\text{-}$ [adj.]
 → $*CC\text{-}en\text{-}\check{\iota}\acute{o}\text{-}nt\text{-}$ [characterized adjective]
 (→ pseudo-ptcp. $*CC\acute{e}n\text{-}\check{\iota}\acute{o}nt\text{-}$)
- e. PIE $*CC\text{-}en\text{-}\acute{u}\acute{o}\text{-}$ [adj.]
 → $*CC\text{-}en\text{-}\acute{u}\acute{o}\text{-}nt\text{-}$ [characterized adjective]
 (→ pseudo-ptcp. $*CC\acute{e}n\acute{u}\text{-}ont\text{-}$)
- f. PIE $*CC\text{-}en\text{-}t\acute{o}\text{-}$ [adj.]
 → abstract $*CC\text{-}en\text{-}t\acute{u}\text{-}$ [m.]

Only the patterns (1a–1e) could produce *-nt*-stems which were eventually re-analyzed as participles of finite verbs. This new morphological analysis may account for Ved. *bhur-aṇ-yānt-* ‘quivering, active’, Gk. φαίνω ‘to make appear’, ῥαίνω ‘to step, to walk’, and Proto-Gmc. **bann-an-* ‘to summon’, which were previously lacking a clear derivational analysis.
